DHANUSH T

Backend Software Engineer with 1.6 years of experience

+918825792599 dhanusht810@gmail.com dhanush-t-552517268 dhanush-10 Bangalore, India

PROFESSIONAL SUMMARY

Backend Software Engineer with over **1.6 year of experience** in designing and scaling high-reliability, high-throughput distributed systems for real-time payment processing using **Java, Haskell, and Python**. Possesses a strong foundation in data structures, algorithms, and object-oriented system design, with hands-on production experience in authorization pipelines, ISO 8583 messaging, clearing and settlement, batch ETL, and PCI DSS-compliant security. Builds and operates containerized microservices and REST APIs on PostgreSQL, Docker, and Kubernetes, consistently achieving improvements in latency and reliability at scale.

WORK EXPERIENCES

Software Development Engineer – Cards Payment Gateway | Full-time — Mar 2025 - Jun 2026
Juspay — *On-site • Bangalore*

- **Reduced p99 authorization latency by 20%** through load testing at thousands of TPS and targeted bottleneck optimization, resolving a critical read-after-write race condition under concurrent async callbacks.
- Implemented **Kafka-based synchronization** between Payment Processor and Reconciliation databases, replacing polling with event-driven transaction propagation for clearing and settlement.
- Engineered **Active-Active card-range table switching** for the 3DS Server with validation and alerting, enabling zero-downtime card-range updates.
- Developed **Rust-based ISO Bridge workers** with persistent TCP connections, ISO 8583 request/response processing, connection health monitoring, and automatic reconnection.
- Engineered the Standing Instruction mandate lifecycle with idempotent callbacks and typed error handling, achieving **99.2% notification reliability**.
- Refactored clearing and settlement using a pluggable handler architecture and built a multi-region HSBC FX conversion module supporting dynamic rates and scheme-compliant rounding.

Technologies / Skills Used : *Java, Haskell, Python, PostgreSQL, Docker, Kubernetes, AES/JWE, ISO 8583*

Backend Developer Intern | Internship — Dec 2024 - Mar 2025
Codingmart Technologies — *On-site • Coimbatore*

- **Secured REST APIs** with role-based access control (RBAC) using Spring Security, JWT, and OAuth2, gating endpoints behind scoped, token-based permissions.
- **Reduced API response latency by up to 30%** through query tuning, composite indexing, and lazy-loading fixes on high-traffic endpoints (Hibernate, MySQL).
- **Automated build, test, and deployment pipelines** using Git and Jenkins, eliminating manual release steps and shortening release turnaround time.

Technologies / Skills Used : *Spring Security, JWT, OAuth2, Hibernate, MySQL, Git, Jenkins*

SKILLS

Databases :	PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Firebase
Frameworks & Libraries :	Spring Boot, Hibernate, REST APIs, Microservices, JUnit, Mockito, React
Programming Languages :	Java, Python, Haskell, SQL, C, C++, Dart, C#
Tools & Platforms :	Docker, Kubernetes, Git, Jenkins, Kafka, Postman, CI/CD, GitHub, Bitbucket, Jira

EDUCATIONS

M. Kumarasamy College of Engineering — Nov 2021 - Apr 2025
B.Tech in Computer Science & Business Systems — *CGPA : 8.0 / 10.0*

CERTIFICATIONS

- **MongoDB Certified DBA Associate** – demonstrated proficiency in database administration and design.
- **1st place** in Code Festa (National Coding Contest) among **200+** participants.
- Qualified for Flipkart GRID 2024, a national-level engineering challenge.
